DETAILED ACTION

Allowable Subject Matter

1. Claims 1 – 23 are allowed.

The following is a statement of reasons for the indication of allowable subject matter:

The primary reason for the allowance of claims 1 (amended) and 2 - 11 is the inclusion of the limitations, "selecting an input subsurface line within an aperture of the target subsurface line; selecting one or more points on a line twice the distance from the target subsurface line to the input subsurface line, wherein each point corresponds to a potential downward reflection point of the surface multiples for a trace in the record."

The primary reason for the allowance of claims 12 (amended), 13 (amended), and 14 - 16 is the inclusion of the limitations, "selecting an input subsurface line within an aperture of the target subsurface line; applying a differential moveout correction to the input subsurface line; performing a two dimensional surface multiple prediction on the input subsurface line to generate a sum of a plurality of potential surface multiples on an inline in one or more multiple contribution gathers that correspond to the target subsurface line, wherein the inline corresponds to the input subsurface line."

The primary reason for the allowance of claims 17 (amended) and 18 - 22 is the inclusion of the limitations, "selecting an input subsurface line within an aperture of the target subsurface line; selecting one or more points on a line twice the distance from the target subsurface line to the input subsurface line, wherein each point corresponds to a potential downward reflection point of the surface multiples for a trace in a record of seismic data."

The primary reason for the allowance of claim 23 (amended) is the inclusion of the limitations, "selecting an input subsurface line within an aperture of the target subsurface line; applying a differential moveout correction to the input subsurface line; performing a two dimensional surface multiple prediction on the input subsurface line to

generate a sum of a plurality of potential surface multiples on an inline in one or more multiple contribution gathers that correspond to the target subsurface line, wherein the inline corresponds to the input subsurface line."

It is these limitations expressed in the claimed combination but not found, taught or suggested in the prior art of record, or for which the prior art does not suggest a motivation such that it would have been obvious to one of ordinary skill in the art, at the time the invention was made, to combine said limitations with remaining claimed features, that makes these claims allowable over the prior art.
